CAF11 - upto 25 m³/h

Features

Advanced Louvre design for high airflow

Clip Mounting System

Two systems for optimal airflow (in/out)

Permanent sealing gasket with Polyurethane Foam

Civaux new **Ultra-Thin** design Fan Filter comes with IP 55 protection using Polyurethane Foam gasket on the back and with **Clip Mounting System** it is easy to install on the cabinet by snapping the whole filter onto the pre-cut hole. The Filter Mat can also very changed very conveniently when required.

The CAF series uses an **Advanced Louvre Design** for the air outlet and thus reaches a high degree of airflow. Depending on the application there are two systems that are available – the **Air-In or Air-out system**. The Air-In system is a standard installation with a filter fan in the lower part of the enclosure which ensures that fresh air is fed into the enclosure (air-intake).

Whereas in the Air-out system, the filter fan is located in the upper area of the enclosure to avoid heat buildups (air- throughput).

CRF40 - upto 620 m³/h

Features

- > Low noise centrifugal fan
- > Advanced ABS Louvre hood design for Increased Airflow
- > Very minimal depth-usage of the enclosure
- > The easy mounting system allows locking the fan from outside or inside of the enclosure
- > Easy accessibility allows fast filter mat replacement
- > Permanent sealing gasket with Polyurethane Foam

Civaux **CRF series roof ventilators** are designed with **Low Noise Centrifugal Fans** which deliver a high-pressure air- throughput, when coupled with an appropriate inlet filter installed on the bottom of the enclosure. This high-pressure performance helps overcome the resistance of airflow within a densely configured enclosure.

The roof ventilators are an effective alternative to conventional fan filters. A roof unit which takes no internal space and will very effectively dissipate the warm air from the top of the unit.
